CECA PARTNERSHIP

The Australian manufacturing industry is an industry of automation and efficiency, forever looking for a way to reduce operating costs in an increasingly global marketplace. Innovation has been key to continued growth of the sector in Australia whereby leading-edge products, process innovation and adjustments to marketing and business models. Solar PV is becoming more prevalent with business' in Australia looking to save on their operating expenses budgets with a rising rate of electricity to combat.

ENERGY CONSUMPTION DEMANDS IN MANUFACTURING

Solar is a product designed to reduce energy costs by producing the appropriate amount of electricity to match a business' consistent energy consumption profile. This is appropriate for business with high usage of conveyer belts, cooling and refrigeration, HVAC, lighting and

other machinery running all day. A Solar PV solution can pay itself off of between 4 – 8 years and have a lifespan of 25 years; highlighting the benefits for a business mature enough to plan ahead.

Over the five years to 2013 the average power bill increased 70% compared by 12% inflation

“Prices have stayed high in part because network businesses – which carry power through poles and wires from the generator to the home – have spent billions of dollars on infrastructure that falling consumption has made redundant. A nasty correction is coming and the question is who will pay for it – power companies, governments or consumers again?”

– Tony Wood – Energy Program Director – Grattan Institute

CECA PARTNERSHIP

The Clean Energy Corporation Australia Partnership is a collective of professional business working with you to provide the best energy solution. We work in partnership with your business from scope, design and consult phase to build – best in business solutions.

CECA will work at arm's length to ensure all operational concerns and financial objectives are clearly outlined to build your solar business case. Through this process, comprehensive analysis is conducted to ensure our systems are perfectly matched to energy consumption, location and financial needs.
